Description:

General scans

Vulnerabilities

Overview

In this section, this report contains overview information that includes statistics by services (in graph-1), OS (in graph-2) and current categorized vulnerabilities (in graph-3) into groups:

- **High Risk** - Exploitation of the vulnerability discovered on the system can directly lead to an attacker gaining privileged access (e.g. administrator, root) to the machine over a remote connection.
- **Medium Risk** - The vulnerability discovered on the system can directly lead to an attacker gaining non-privileged access (e.g. standard user) to the machine over a remote connection.
- **Low Risk** - The vulnerability discovered on the system provides enticement data to the attacker that may be used to launch a more informed attack against the target environment. In addition, the vulnerability may indirectly lead to an attacker gaining some form of access to the machine over a remote connection.
- **Informational Risk** - A finding on the system that provides data to an attacker that is of lesser value to an attacker than the enticement data provided by a low risk vulnerability.
**Graph 1:** Vulnerabilities statistic by services
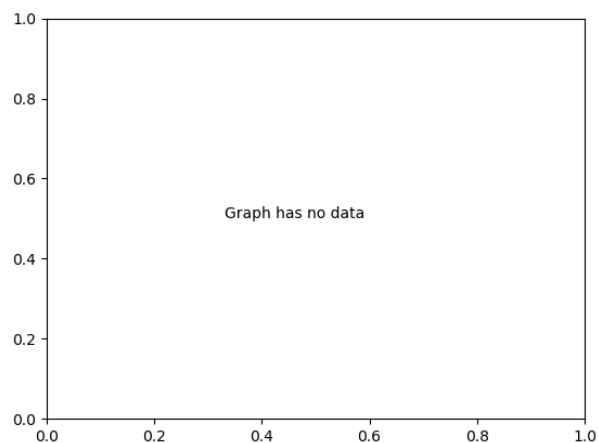

Graph 2: Vulnerabilities statistic by OS
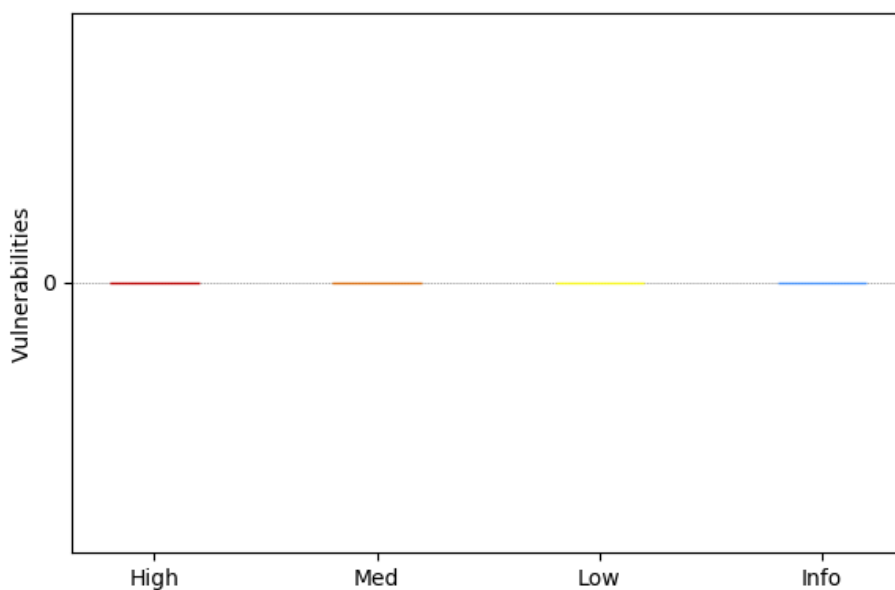

Graph 3: Vulnerabilities statistic

Vulnerabilities by Scan Task

In this section, the report contains scan brief information of vulnerabilities that were discovered by this scan task.

Graph 4: Vulnerabilities of scanned hosts

Scan Result:

Scan Task	Start Time	Finished Time	Vulnerabilities			
			High	Med	Low	Info

Table 1: Vulnerabilities by Scan Task

Vulnerabilities by Host

In this section, the vulnerabilities is listed by host.

Scan Result:

Hostname	Ip Address	Vulnerabilities			
		High	**Med**	**Low**	**Info**

Table 1: Vulnerabilities by Host

Vulnerabilities by Host
